

Caseware SmartSync™

Collaborate on Caseware Working Paper files
from anywhere, at any time.

Caseware SmartSync™ is a file synchronization system that enables audit and accounting firms to collaborate simultaneously on centralised client files. Teams can work on local copies of a file in real-time, while each file is synced automatically in the background.

All historical changes as well as who changed what are tracked, whilst no one in the team needs to wait for anyone to pass on a file or return to the office. When working offline, all changes are updated as soon as a connection to the network is re-established.

When combined with Caseware Cloud, distributed teams can seamlessly collaborate together on the same engagement, wherever they are, at any time.

Key Features

One Master Copy

Store a single copy of every client file in a centralised location and collaborate across the team in real-time.

Complete Historical Changes

Track all changes on the engagement with visibility on who did what when, and rollback to previous versions when needed.

Offline support

Work offline and automatically synchronise all changes when the connection to the network is re-established.

Caseware Cloud Integration

Store a centralised copy of a Working Paper on Caseware Cloud file that's always available from any location at any time.
